## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - Claims 1-7, drawn to a pressure sensitive adhesive, classified in class 525, subclass 123.
  - II. Claims 8-10, drawn to self-adhesive article, classified in class 428, subclass 343.
  - III. Claim11, drawn to a process for producing self-adhesive articles, classified in class 156, subclass 60+.
- 2. Inventions I and II are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a pressure sensitive adhesive and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. In this case, a pressure sensitive adhesive may be used as is without being fabricated into a self-adhesive article. An example would be a glue stick, or the material can be placed into a tube dispenser. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1713

3. Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they

Page 3

are not disclosed as capable of use together and they have different modes of operation, different

functions, or different effects (MPEP § 806.04, MPEP § 808.01). Whereas invention I relates to

a pressure sensitive adhesive, invention III relates to a process for producing a self-adhesive

article. Since the pressure sensitive adhesive is not the same as the self-adhesive article, the two

inventions have different functions and effects.

4. Inventions II and III are related as process of making and product made. The inventions

are distinct if either or both of the following can be shown: (1) that the process as claimed can be

used to make other and materially different product or (2) that the product as claimed can be

made by another and materially different process (MPEP § 806.05(f)). In the instant case, the

generically described multi-roll applicator unit can be used to make coatings for confectionaries

instead of self-adhesive articles.

5. Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art as shown by their different classification, restriction for examination

purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required

for Group I is not required for Group II or III, restriction for examination purposes as indicated is

proper.

6.

Art Unit: 1713

7. Because these inventions are distinct for the reasons given above and the search required

for Group II is not required for Group III, restriction for examination purposes as indicated is

proper.

8. Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art because of their recognized divergent subject matter, restriction for

examination purposes as indicated is proper.

9. A telephone call was made to Mr. Kurt G. Briscoe on January 16, 2002, to request an oral

election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an

election of the invention to be examined even though the requirement be traversed (37 CFR

1.143).

10. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a request under 37 CFR

1.48(b) and by the fee required under 37 CFR 1.17(i).
